Other arrangement : The transfer of the relevant employees and related personnel associated with the Target Assets under the Agreements should be managed under the principle of “transfer of personnel together with assets (business)” in accordance with the documents to be agreed upon separately.

The sources of fund for payment of the consideration under the Agreements will be the self-owned fund of the Purchasers.

BASIS AND METHOD OF DETERMINING THE CONSIDERATION

As of the Valuation Reference Date, the net book value of the 5 Target Assets of the Transactions totalled to RMB4,826.7910 million and was valued at RMB6,791.1654 million in aggregate, representing an appreciation of RMB1,964.3744 million and an appreciation rate of 40.70% as a whole. The basis and method of determining consideration under the Agreements are detailed as follows.

Century Bright Company Agreement

China United Assets Appraisal Group Co., Ltd., an appraisal corporation that has completed the Securities Business Recordation, issued the assets valuation report taking 30 June 2020 as the Valuation Reference Date with the valuation result adopting assets-based approach as the final appraisal conclusion. The book value of net assets of the Target Assets held by Century Bright Company to be purchased by Overseas Investment Company was RMB4,377.7032 million, with an appraisal value of RMB5,769.3053 million, representing an appreciation of RMB1,391.6021 million and an appreciation rate of 31.79%. As such, the consideration of RMB5,769.3053 million was determined by the Overseas Investment Company and Century Bright Company upon arm’s length negotiation (recorded valuation result shall prevail).

The relatively high appreciation rates of the Target Assets are mainly attributable to the increase in land price, increase in the overall cost of building materials and labour, and the shorter accounting depreciation period for buildings, machineries and equipment in comparison with the economic useful life thereof.

Assets Company Agreement

Beijing Guorong Xinghua Assets Appraisal Co., Ltd., an appraisal corporation that has completed the Securities Business Recordation, issued the assets valuation report taking 30 June 2020 as the Valuation Reference Date with the valuation result adopting assets-based approach as the final appraisal conclusion. The book value of net assets of the Target Assets held by Assets Company to be purchased by Sinopec Corp. was RMB6.4314 million, with an appraisal value of RMB19.9922 million, representing an appreciation of RMB13.5608 million and an appreciation rate of 210.85 %. As such, the consideration of RMB19.9922 million was determined by Sinopec. Corp and Assets Company upon arm’s length negotiation (recorded valuation result shall prevail).

The relatively high appreciation rates of the Target Assets are mainly attributable to the increase in land price, increase in the overall cost of building materials and labour, and the shorter accounting depreciation period for buildings, machineries and equipment in comparison with the economic useful life thereof, as well as the relatively small scale of the net assets, which resulted in relatively high appreciation rate. Among the aforesaid, (1) houses and buildings were recognised around 2012 on average. At the Valuation Reference Date, the net carrying value was RMB10.58 million, and the appraisal value was RMB21.83 million, representing an appreciation rate of 106%, which was mainly attributable to the increase in cost of materials and labour and the fact that the accounting depreciation period for buildings is obviously shorter than their economic useful life. (2) Machineries and equipment were recognised between 2012 to 2020. At the Valuation Reference Date, the net carrying amount was RMB62.22 million, the appraisal value was RMB78.30 million, representing an appreciation rate of 25.8%. It is mainly because the accounting depreciation period for machineries and equipment is shorter than their economic useful life. (3) The land use right of intangible assets was recognised around 2010. At the Valuation Reference Date, the net carrying value was RMB6.07 million, and the appraisal value was RMB9.94 million, representing an appreciation rate of 63.8%, mainly due to the increase in land price recently.

Cangzhou branch Agreement

Beijing Guorong Xinghua Assets Appraisal Co., Ltd., an appraisal corporation that has completed the Securities Business Recordation, issued the assets valuation report taking 30 June 2020 as the Valuation Reference Date with the valuation result adopting assets-based approach as the final appraisal conclusion. The book value of net assets of the Target Assets of Assets Company to be purchased by Sinopec Corp. was RMB92.5621 million, with an appraisal value of RMB138.2066 million, representing an appreciation of 45.6445 million and an appreciation rate of 49.31%. As such, the consideration of RMB138.2066 million was determined by Sinopec Corp. and Assets Company upon arm's length negotiation (recorded valuation result shall prevail).

The relatively high appreciation rates of the Target Assets are mainly attributable to the increase in the overall cost of building materials and labour, and the shorter accounting depreciation period for buildings, machineries and equipment in comparison with the economic useful life thereof.

Orient Petrochemical Agreement

Beijing China Enterprise Appraisals Co., Ltd., an appraisal corporation that has completed the Securities Business Recordation, issued the assets valuation report taking 30 June 2020 as the Valuation Reference Date with the valuation result adopting assets-based approach as the final appraisal conclusion. The book value of net assets of the Target Assets held by Orient Petrochemical to be purchased by Sinopec Corp. was RMB237.7880 million, with an appraisal value of RMB715.0314 million, representing an appreciation of RMB477.2434 million and an appreciation rate of 200.70%. As such, the consideration of RMB715.0314 million was determined by Sinopec Corp. and Orient Petrochemical upon arm's length negotiation (recorded valuation result shall prevail).

The relatively high appreciation rates of the Target Assets are mainly attributable to the increase in the appraisal value of the fixed assets. The appraisal value of fixed assets was RMB0.671 billion, representing an appreciation of RMB0.479 billion or 249.39% as compared to the net book value of RMB0.192 billion. The appreciation is mainly due to the large-scale provision of impairment as a result of the excess production capacity of relevant products arising from the intense market competition during the previous years. According to the China Accounting Standards for Business Enterprises, the provision of impairment for fixed assets cannot be reversed once recognised. In recent years, in view of the improvement in market sentiment and the continuing improvement of enterprises in quality and efficiency, there is an enhancement in profitability. Currently, the main production devices are in good operational condition and the production has reached the normal level. The economic life of various fixed assets is recognised based on normal operating conditions. The appraised residue ratio is higher than that of the carrying value residue ratio.

Beihai Petrochemical Agreement

Beijing Guorong Xinghua Assets Appraisal Co., Ltd., an appraisal corporation that has completed the Securities Business Recordation, issued the assets valuation report taking 30 June 2020 as the Valuation Reference Date with the valuation result adopting assets-based approach as the final appraisal conclusion. The book value of net assets of the Target Assets held by Beihai Petrochemical to be purchased by Beihai Refining and Chemical was RMB112.3063 million, with an appraisal value of RMB148.6299 million, representing an appreciation of RMB36.3236 million and an appreciation rate of 32.34 %. As such, the consideration of RMB148.6299 million was determined by Beihai Refining and Chemical and Beihai Petrochemical upon arm's length negotiation (recorded valuation result shall prevail).

The appreciation in valuation is mainly attributable to the longer economic useful life of the pier in comparison with its accounting depreciation period.
